RUTGERS-CAMDEN
SEMINAR SERIES

12:45PM ON APRIL 22ND IN ARMITAGE-124 FOLLOWED BY OPEN DISCUSSION AND REFRESHMENTS AT THE ALUMNI HOUSE AT 2PM

Ananda Gunawardena
Rutgers University

Title: The AI's impact on the Future of Education

Abstract: As AI continues to transform education, we need to think about how AI will impact education and future workforce development. This seminar will highlight our work with NJ AI Hub (https://njaihub.org/), a centralized resource for foundational research, innovation economy, education and workforce development. We will also introduce key AI innovations, including Cubits.ai, an AI-driven course platform; CodeBench, a cloud-based coding environment; and SmartSlides, an AI-powered tool for creating dynamic presentations. These technologies aim to make learning more interactive, accessible, and effective. We will explore how AI is reshaping education and how new tools and course reimagining can support instructors and students in the evolving digital landscape.

This is a joint event by the Research Office, Provost Office and Math department
